CPI Certificate Installation for Windows

GUIDE FOR DOWNLOADING AND INSTALLING CPI CERTIFICATES

INSTA

July 17, 2019

Introduction

This guide will walk you through downloading and installing your CPI certificate on your workstation.

You will need:

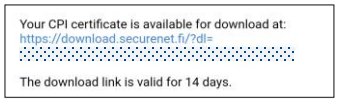

1. Email titled “CPI certificate download”
2. SMS message with password

If you haven’t received the email or the SMS, or if you need other assistance, please contact your CPI training provider.

Downloading the CPI certificate

- Open the email titled “CPI certificate download”
- Click the web address in the email→

  - Note: If you a prompted with “Select certificate”, you can bypass this by selecting ‘Deny’ or ’Cancel’
- Enter the password you have received by SMS and click Download (see below)
- Save the .p12 file to your preferred location on your workstation

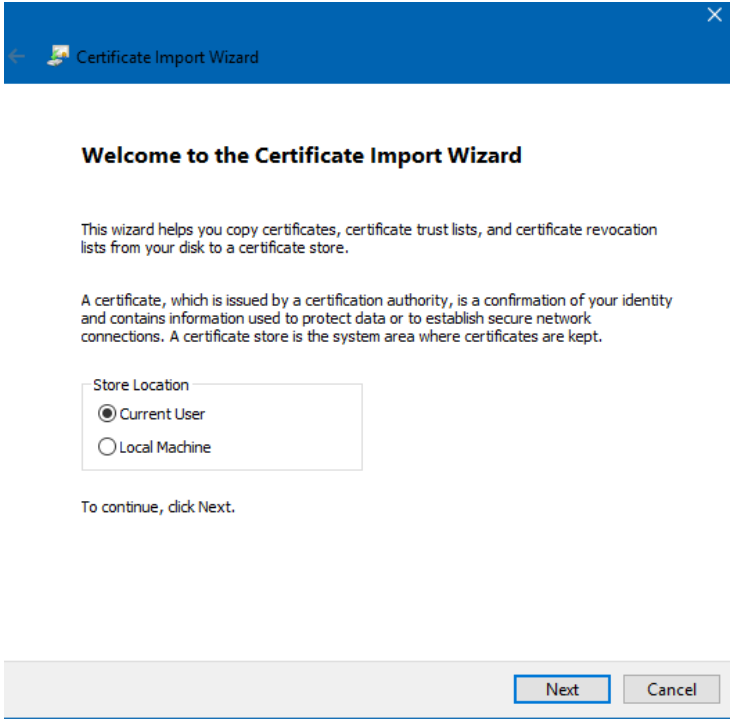

Installing the CPI certificate (1/10)

- Browse to the downloaded .p12 file
- Double click the file to open it

Certificate Import Wizard opens.

- Select 'Current User' for 'Store location'
- Click 'Next'

- Click ‘Next’

 © INSTA

Installing the CPI certificate (5/10)

- Click 'Finish'

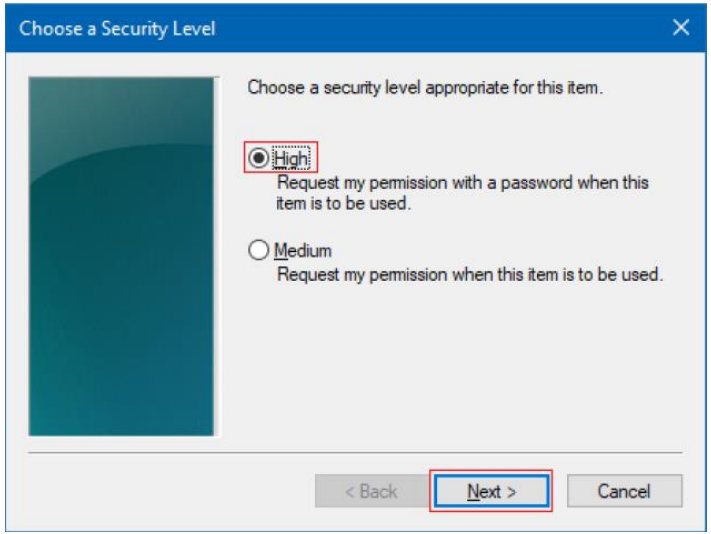

Installing the CPI certificate (6/10)

- Click ‘Set Security Level…’
- Click ’OK’

Installing the CPI certificate (7/10)

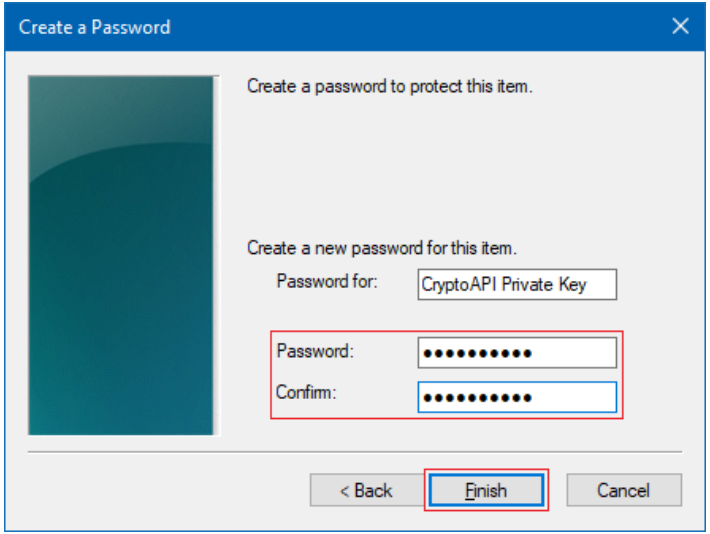

- Important: Select security level **High**
- Click 'Next'

Installing the CPI certificate (8/10)

You are now prompted to create a password for protecting your personal Private Key.

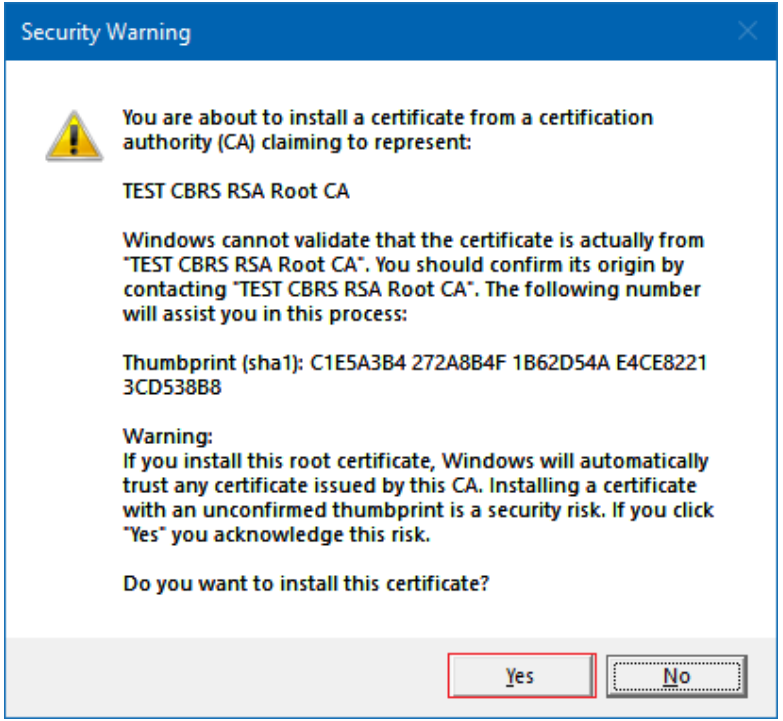

- Important:
  - You need to remember this password, as you will need it when using your CPI certificate
  - Keep the password secret and separate from your workstation
  - Inform your Training Program Administrator immediately if the password has been revealed
- Type your password in the ‘Password’ and ‘Confirm’ sections
  - Note: Password complexity needs to comply with the security policy of your organization, otherwise an error is shown
- Click ‘Finish’

Installing the CPI certificate (9/10)

A warning may be shown (your text may vary slightly).

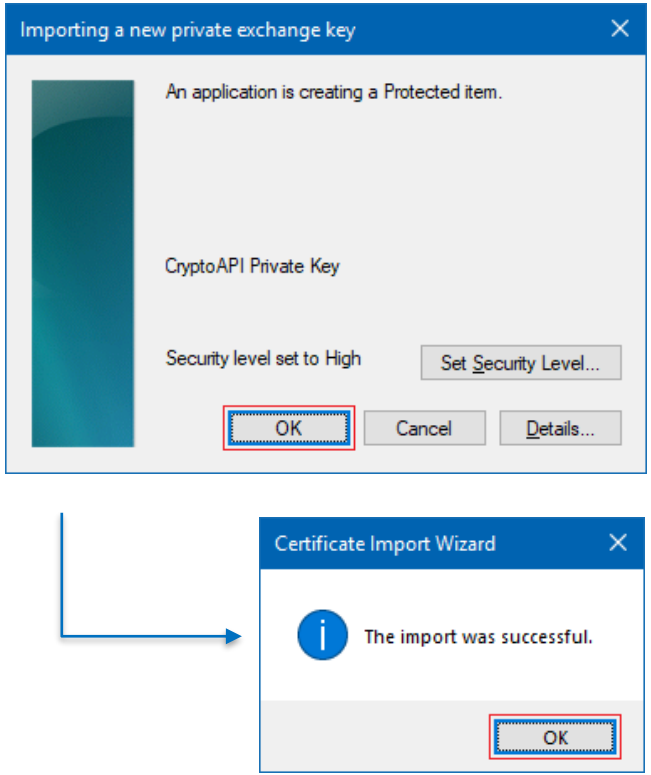

- Click ‘Yes’

Installing the CPI certificate (10/10)

- Click ‘OK’
- Click ‘OK’

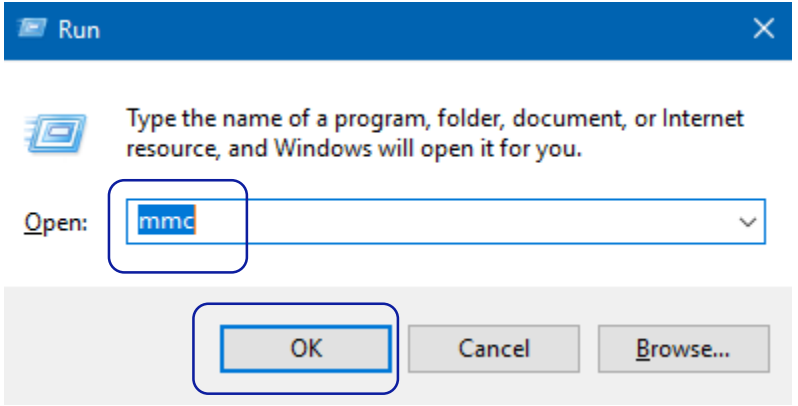

The installation is now complete!

Checking the installed certificates (1/6)

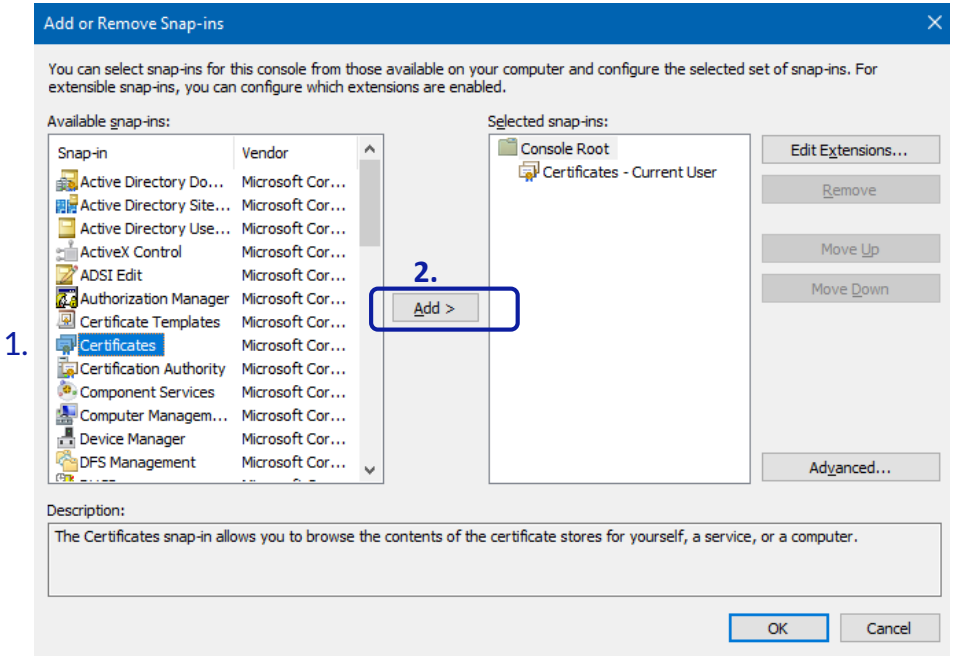

- Press Windows + R to open the Run command
- Enter ‘mmc’
- Click ‘OK’

Note: You may be prompted for Windows admin user name and password at this point.

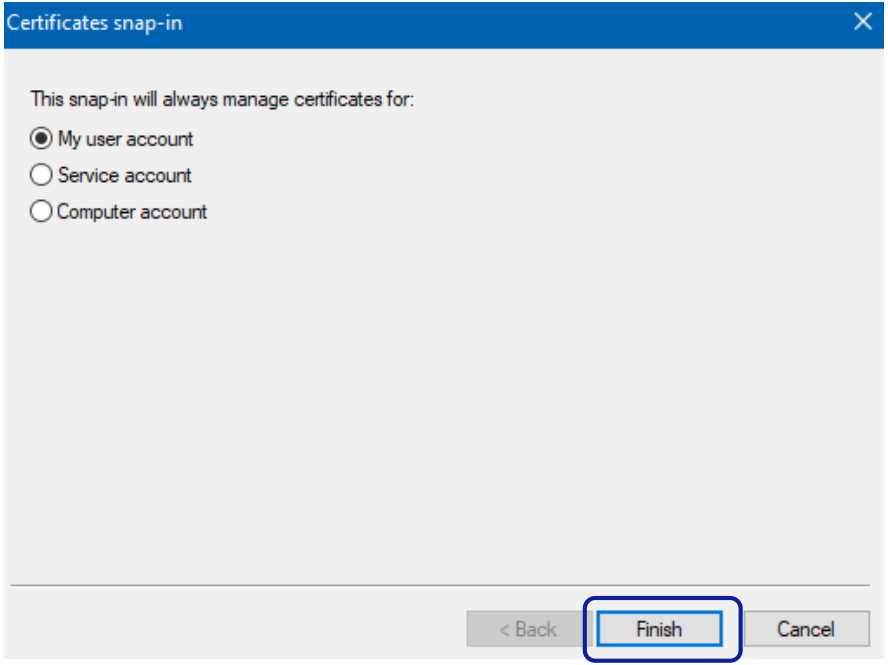

Checking the installed certificates (2/6)

- Press Ctrl+M to open the ‘Add or Remove Snap-ins’ window
- Select ‘Certificates’ on the left
- Click ‘Add’

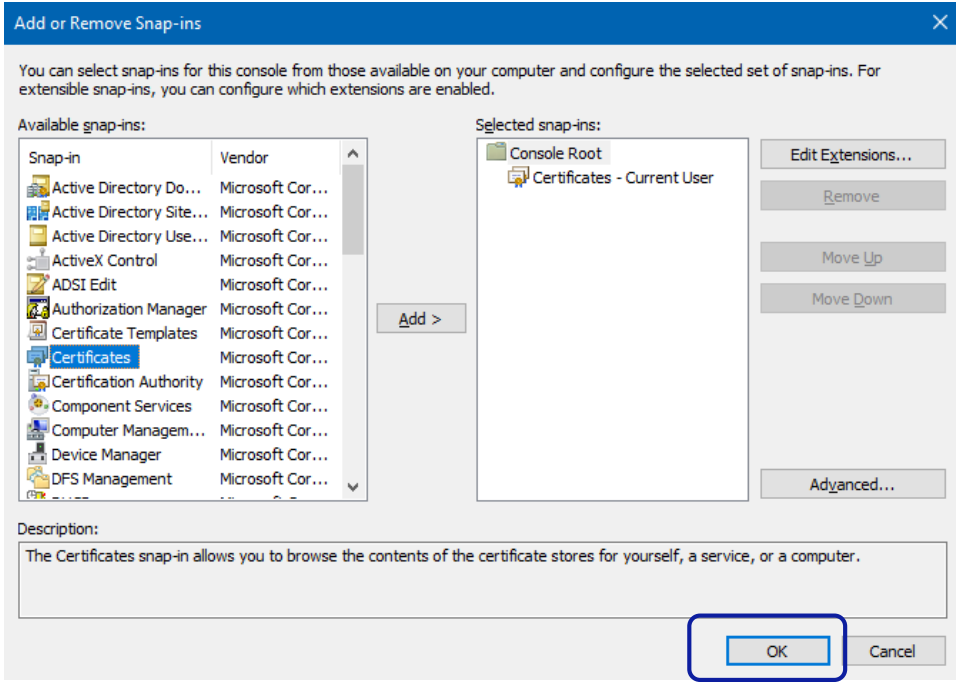

Checking the installed certificates (3/6)

- Click 'Finish'

Checking the installed certificates (4/6)

- Click 'OK'

Checking the installed certificates (5/6)

- Expand the ‘Console Root’ view as shown on the right
- Check that certificates are located in correct folders:

Personal → Certificates

Your personal CPI certificate

Issued To	Issued By
123456Test1	WInnForum RSA Professional Installer CA

Trusted Root Certification Authorities → Certificates

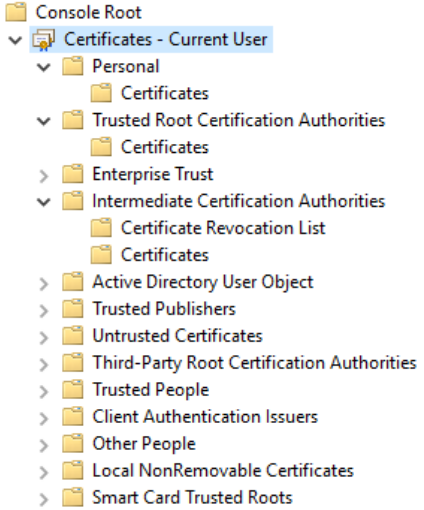

WInnForum RSA Root CA

Issued To	Issued By
WInnForum RSA Root CA	WInnForum RSA Root CA

Intermediate Certification Authorities → Certificates

WInnForum RSA Professional Installer CA

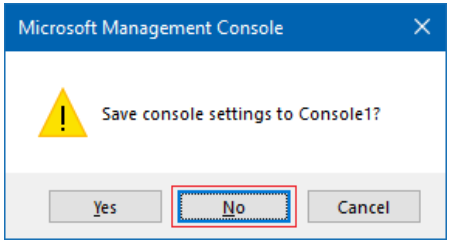

Issued To	Issued By
WInnForum RSA Professional Installer CA	WInnForum RSA Root CA

Checking the installed certificates (6/6)

- Close the ‘Console1’ window
- Click ‘No’ when prompted to save your console settings

You can now start using your new CPI certificate!

Removing the installed certificates (1/2)

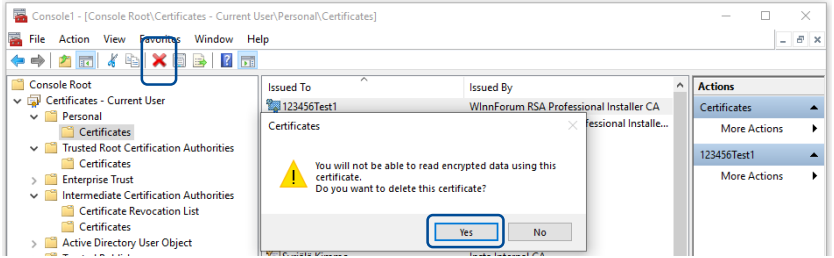

If you need to remove the installed certificates:

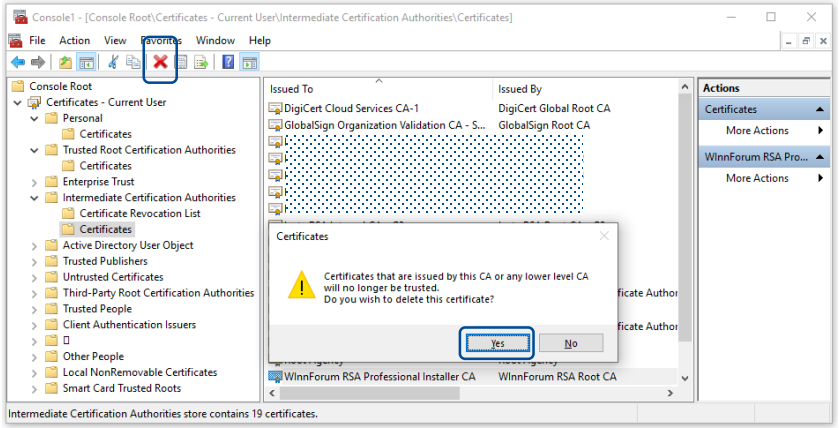

- Follow the previous instructions “Checking the installed certificates” to view the certificates

Caution: Remove only the three installed certificates!

For each certificate to be removed:

- Click on the certificate
- Press ‘Delete’ key on your keyboard or red ‘X‘ in Tools menu
- Click ‘Yes’ to confirm deletion

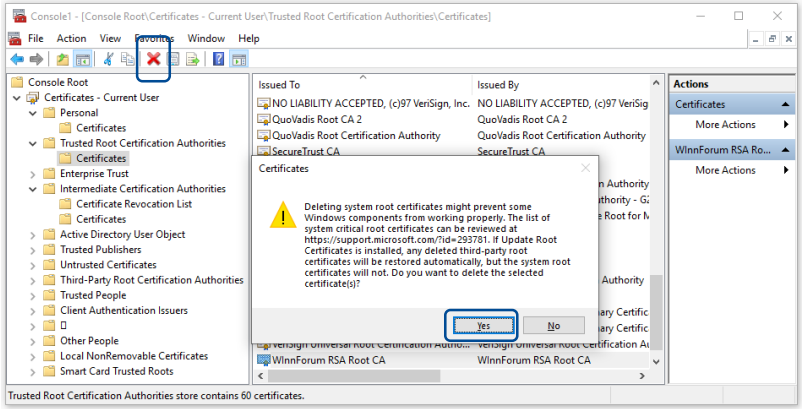

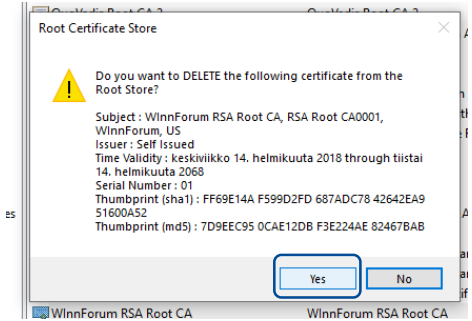

Removing the installed certificates (2/2)

Once you are done:

- Close the ‘Console1’ window
- Click ‘No’ when prompted to save your console settings
